

Urethane Disc Return Roll

Why *Martin* Urethane Disc Rolls?

Martin Urethane Disc Return Rolls can be used in place of rubber disc return rolls (RRD's). This is beneficial when the application involves an abrasive material that may stick to the belt as carryback and wear away at the shell of a steel roll or the rubber discs on an RRD roll.

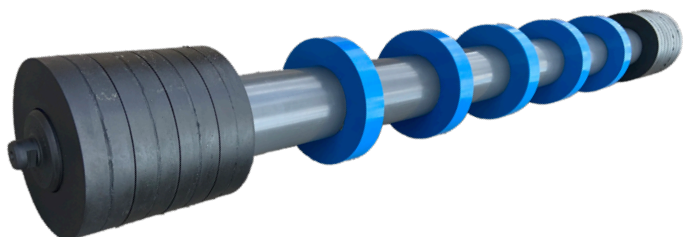

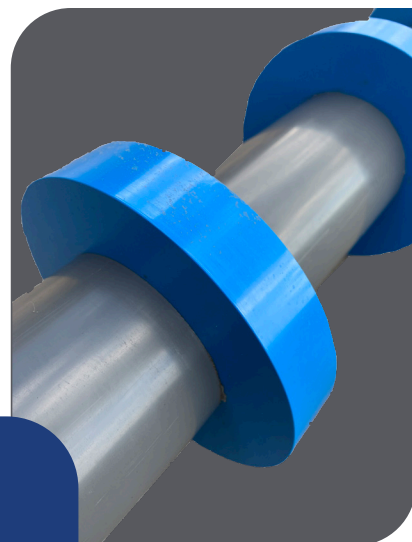

Martin Urethane Disc Return Rolls are also ideal in wet applications with sticky materials that may build up on return rolls, causing belt tracking issues.

The center discs of our standard URD product are 85 Shore A urethane to combat the wear caused by carryback, which is concentrated toward the center of the belt. The 5 inches of massed discs on each end are conventional, 60-durometer rubber discs.

Martin Part Numbers

- C5-URD-18
- C5-URD-24
- C5-URD-30
- C5-URD-36
- C5-URD-42
- C5-URD-48
- C5-URD-54
- C5-URD-60

Currently available in CEMA C 5" diameter.
