

KEEP YOUR EMPLOYEES SAFE BY REDUCING BELT CONVEYOR MAINTENANCE HAZARDS

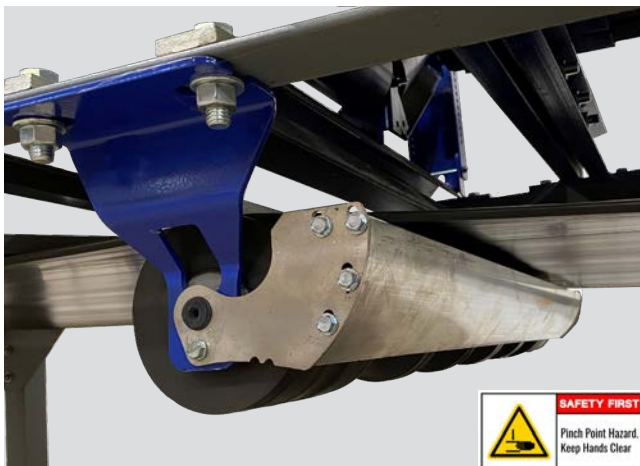

Reduce maintenance and operate safely

Martin return roll pinch guards create a safe work environment by reducing employee exposure at the pinch point between the return roll and conveyor belt during operation. Martin pinch guards offer easier maintenance by not having to remove components while installing the guard reducing maintenance costs and time.

- The aluminum pinch guard blade is light, yet rigid, and can be used on any standard belt width without flexing or bowing.
- Aluminum is resistant to elements and corrosion because of its natural, thin, hard oxide layer, which develops on the surface when the metal comes into contact with oxygen. Even if the surface is scratched, the oxide layer will immediately regenerate, so the guard can be in service for many years.

	Roll Size	Belt Width	Part Numbers
CEMA C	4,5,6	18 in-60 in	• C4-PG-BW • C5-PG-BW • C6-PG-BW
CEMA D	5,6	24 in-72 in	• D5-PG-BW • D6-PG-BW

Easy to install

Shipped as a prepackaged kit, ready to install upon delivery allows for consistent quality control ensuring quick and safe installation.

- Mount on existing Martin return Idler brackets
- Compatible with standard or belt saver drop brackets
- No need to remove or loosen components to install
- Adjustable to your conveyor needs
- 304 Stainless, corrosion resistant side plates
